Math Equations in GDB

User Guide

May 2015
To insert math equations in GDB answer, following are the guidelines:-

1. User must install **Math Type** software to generate the various math equations.

2. Launch the **Math Type** and go to the **Preferences** Tab in menu bar and click on “Cut and Copy Preferences” and match the settings as per given below screenshot and click “Ok”.

![Cut and Copy Preferences dialog box](image.png)
**Note:** In previous versions of *Math Type*, go to *Preferences* Tab in menu bar and click on “Translators” and match the settings as per given below screenshot and click “Ok”

![Translators](image)

3. Now generate required math equation, and simply copy it by pressing (Ctrl+C). It will copy *Math Equation Script* instead of actual equation, if step 2 is properly followed.
4. After copying Equation from *Math Type*, simply paste the equation script into GDB answer interface in VULMS and press “Post Message” button.

5. Verify Math type GDB answer and its details from the given interface in VULMS under GDB section.
